

Phi Network Sovereign Gate (verify.kai) â App Summary

What It Is

Phi Network Sovereign Gate is a KaiOS-style web client for the Phi Network, anchoring money, identity, and verification to Kai-Klok time and Proof of Breath. It exposes the Verifier (Inhale/Exhale) and KaiVoh emission surfaces.

Who It's For

People using the Phi Network to mint, verify, transfer, or emit value/content under Phi Keys and Sigil-Glyph identities.

What It Does

- Inhale/Exhale console to mint/receive/send Phi value (Verifier).
- Verify sigil-glyphs and transfers; display proof and signature metadata.
- PhiStream / history view for resonance stream activity.
- Live Kai-Klok pulse/beat/step display for all actions.
- KaiVoh emission surface for posts, signals, and receipts with sigil provenance.
- Offline-auditable verification assets (ZK files in public/zk).

How It Works

- React + TypeScript app built with Vite; routed with react-router; App shell lazy-loads pages and modals.
- Verify flow in src/pages/VerifyPage.tsx parses sigils, builds proof bundles, hashes content, and runs Groth16 verification.
- Sigil Explorer pulls from API bases with primary/fallback selection and optional same-origin proxy; state tracked in registryStore.
- Kai-Klok time and valuation utilities feed live pulse/price displays across the UI.

How To Run

- Node.js >= 20.19.0 (package.json engines).
- Install deps: pnpm install (or npm install).
- Optional env: VITE_API_BASE (src/utils/constants.ts).
- Start dev server: pnpm dev (or npm run dev).
